

The Ultimate Solution for Managing Your Client-side Web Apps

Berlin – April 11. 5apps launches Deploy, an all-in-one platform for hosting and distributing your client-side web apps. At the touch of a button, Deploy configures your app for all major platforms and web stores. So you can spend less time managing your apps and more time building them.

So you've built a killer app – good for you! But that's only half the story. Now you need to host it, distribute it to various platforms and make sure it runs without downtime. App maintenance requires a lot of work and a different set of skills. Most developers would rather focus on what they love: building great apps.

Now you can. Deploy lets you outsource the grunt work. When your app is ready, simply push the code via Git. Deploy automatically configures your app for installation on all major platforms while preparing it for submission to the Chrome Web Store and Firefox Marketplace.

Deploy also does maintenance. If you've sold your app through an app store, your customers expect it to be online 24/7. Deploy ensures that your app runs with zero downtime. You can sleep easy, knowing that your hard work is in professional hands.

Deploy is the first commercial platform of its kind, built specifically for frontend developers and web app delivery. Developers can build using any framework, and no SDK means no platform lock-in.

Deploy doesn't touch your codebase – the configuration code is added separately. You can mix and match your deployment strategy, choosing from different builds, add-ons and installation formats. Want your app to work offline? Just flip a switch and Deploy generates the appcache manifests and update dialog.

Deploy is the ideal tool for Firefox OS developers. The platform fully integrates with the Firefox marketplace and will soon let you accept payments.

5apps is proud to support the open source community by offering free hosting and development to websites such as tosdr.org. The 5apps team frequently contributes code to a variety of open-source projects.

About 5apps

5apps is run by two veteran web developers – passionate geeks who believe strongly in web standards and the open-source community. Deploy is the first of many products to come. The ultimate goal is a world in which all user software is built with web technologies.

The company is based in Amsterdam with a second office in Berlin. 5apps is funded by NLnet, an organization that supports open-source projects around the world.
