We build tools for the web

Hello, we're Byteflip, a young web agency helping startups with development and design. We can translate your idea into a successful web product, all the way from concept to completion.

We're different to most web agencies, because we use both sides of the brain. Byteflip offers technical wizardry **and** creative thinking – that's a rare combination.

If you can imagine it, we can build it. We're agile coders who aren't afraid to venture off the beaten path to get the results you need.

Byteflip is run by three best friends in Hamburg, proud geeks who love nothing more than solving complex problems and building better tools for the web.

We've got the skills

The Byteflip recipe? One part coding genius, one part inspired design. The stuff we build looks good and works well. Behind every sleek interface lies a powerful code engine running the latest web technologies.

Design
We do responsive design for desktop, tablet and mobile. Our interfaces combine modern style with commonsense usability.

Development
Our core strength is Ruby on Rails. We're also experts at MySQL, jQuery, HTML5, payment systems, full text search, and large data processing.

We've got the team

Alex

Alex is our frontend mastermind, but he's got plenty of backend experience too. He's worked with startups (Qype, 9Flats), creative agencies (Scholz and Friends) and corporate clients (Siemens, Opel). He has a freaky obsession with the latest technologies like Node.js and Rubymotion for iOS. When he's not building kickass web apps, you'll find Alex rattling a Kicker table or playing Dota 2.

Eduard

Eduard is our resident design specialist. Before Byteflip, he spent five years as a graphic designer in an advertising agency. He's mastered both HTML and CSS, and now focuses on making the web more beautiful. When he's not glued to a design project, you'll find Eduard with a big camera around his neck – he also runs a photography business.

Jaroslav

His real name is Jaroslav, but round here we call him Mr. Database. In a former life he was a senior developer at Qype and CTO of 9flats. His "mad database skillz" include elasticsearch, big data sets and performance optimization. Jaroslav enjoys playing football with his young son and riding his mountain bike crazy fast down steep hills.

Let's talk

Byteflip is where your ideas take shape and concepts become reality. So let's start the conversation. Send us a few details and we'll be in touch shortly.
